Introduction

About this chapter

Read this chapter before installing G60 projector. It contains important information concerning installation requirements for the G60 projector, such as minimum and maximum allowed ambient temperature, humidity conditions, required safety area around the installed projector, required power net, etc.

Furthermore, careful consideration of things such as image size, ambient light level, projector placement and type of screen to use are critical to the optimum use of the projection system.

Clarification of the term “G60” used in this document

When referring in this document to the term “G60” means that the content is applicable for following Barco products:

- G60-W7, G60-W8, G60-W10

Barco provides a guarantee relating to perfect manufacturing as part of the legally stipulated terms of guarantee. Observing the specification mentioned in this chapter is critical for projector performance. Neglecting this can result in loss of warranty.

Overview

- Installation Requirements
- Projector package overview
- Main unit
- Input/Output (I/O) Panel
- Control panel
- Remote Control Unit (RCU)
- Lenses

1.1 Installation Requirements

Environment conditions

Table below summarizes the physical environment in which the G60 projector may be safely operated or stored.

Environment	Operating	Non-Operating
Ambient Temperature	5 °C (41 °F) to 40 °C (104 °F)	-10°C (14°F) to 60°C (140°F)
Humidity	10% to 85% RH Non-Condensed	5% to 90% RH Non-Condensed
Altitude	10000 ft maximum at 0°C to 30°C	

Cooling requirements

The projector is fan cooled and must be installed with sufficient space around the projector head, minimum 100 cm (39.4 inch) to ensure sufficient air flow. It should be used in an area where the ambient temperature, as measured at the projector air inlet, does not exceed +40°C (+104°F).

For ceiling mounted installations, make sure to leave 30 mm (1.2") between the ceiling mount and the bottom intake vents of the projector.

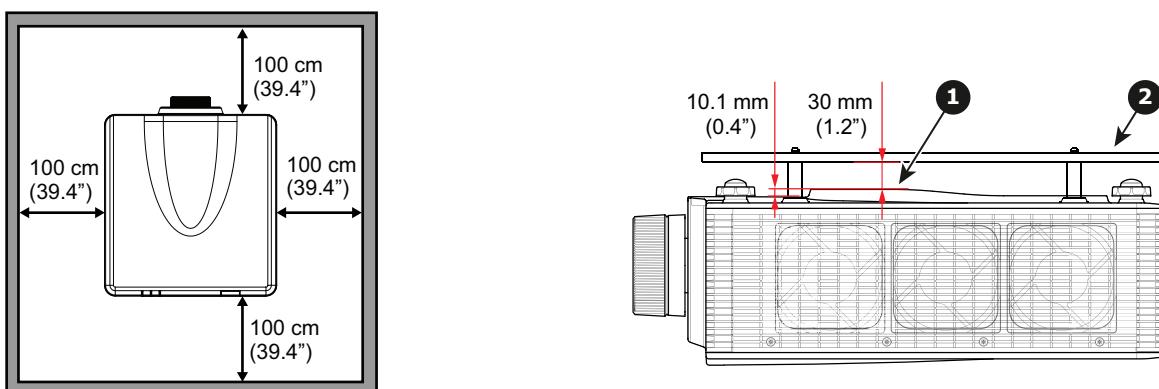

Image 1-1

- 1 Bottom intake vents
- 2 Ceiling mount plate

Clean air environment

The projector must always be mounted in a manner which ensures the free flow of clean air into the projectors ventilation inlets. For installations in environments where the projector is subject to airborne contaminants such as that produced by smoke machines or similar (these deposit a thin layer of greasy residue upon the projectors internal optics and imaging electronic surfaces, degrading performance), then it is highly advisable and desirable to have this contamination removed prior to it reaching the projectors clean air supply. Devices or structures to extract or shield contaminated air well away from the projector are a prerequisite, if this is not a feasible solution then measures to relocate the projector to a clean air environment should be considered.

Only ever use the manufacturer's recommended cleaning kit which has been specifically designed for cleaning optical parts, never use industrial strength cleaners on the projector's optics as these will degrade optical coatings and damage sensitive optoelectronics components. Failure to take suitable precautions to protect the projector from the effects of persistent and prolonged air contaminants will culminate in extensive and irreversible ingrained optical damage. At this stage cleaning of the internal optical units will be noneffective and impracticable. Damage of this nature is under no circumstances covered under the manufacturer's warranty and may deem the warranty null and void. In such a case the client shall be held solely responsible for all costs incurred during any repair. It is the clients responsibility to ensure at all times that the projector is protected from the harmful effects of hostile airborne particles in the environment of the projector. The manufacturer reserves the right to refuse repair if a projector has been subject to knowingly neglect, abandon or improper use.

Main power requirements

The G60 projector operates from a nominal mono phase power net with a separate earth ground PE.

Projector	Power requirements
G60-W7	AC INPUT 100-240V, 50/60Hz
G60-W8	AC INPUT 100-240V, 50/60Hz
G60-W10	AC INPUT 100-240V, 50/60Hz

The power cord required to connect the projector with the power net is delivered with the projector.

Projector weight

Do not underestimate the weight of the projector. Be sure that the pedestal or ceiling mount on which the projector has to be installed is capable of handling five (5) times the complete load of the system.

Projector	Weight (without lens)
G60-W7	16.9 kg / 37.3 lb
G60-W8	17.4 kg / 38.4 lb
G60-W10	22.7 kg / 50.1 lb

1.2 Projector package overview

Box content

This projector comes with all the items shown below. Check to make sure your package is complete. Contact your dealer immediately if anything is missing.

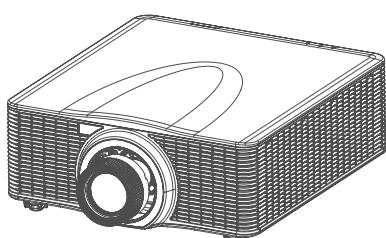

Image 1-2: Projector.

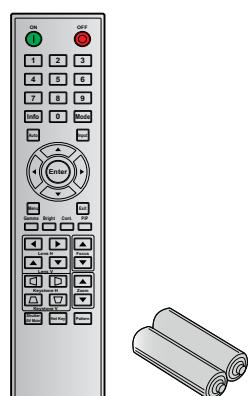

Image 1-3: Remote Control with two AAA size batteries.

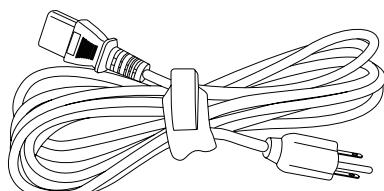

Image 1-4: Power cord.

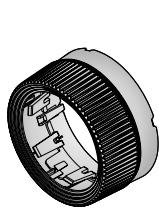

Image 1-5:
Lens ring for
standard lens.

Image 1-6:
Lens ring for
Wide-, Long-,
and Ultra-Long
zoom lens.

The product Safety Manual and Quick Start Guide are also included. Download the complete and latest updated installation manual and user guide form the Barco website.

The projection lens is an optional item, not a standard accessory in the package.

Due to the difference in applications for each country, some regions may have different accessories.

Button function

Button	Function
POWER	Turn the projector on or off.
LENS	Adjust lens position.
MENU	Show the main menu on screen.
EXIT	Return to previous menu or exit menu if at top level.
ENTER	Confirm the settings.
INPUT	Select an input source.
ZOOM	Adjust the image size.
FOCUS	Adjust the image focus.
LEFT	Navigate left through the menu.
UP	Navigate up through the menu.
DOWN	Navigate down through the menu.
RIGHT	Navigate right through the menu.

1.6 Remote Control Unit (RCU)

Button identification

Button location	No.	Button	Function
	1	ON	Turn on the projector.
	2	OFF	Turn off the projector.
	3	Number	Input numbers (0-9).
	4	Info	Displays information on the source image.
	5	Mode	Select a preset picture mode.
	6	Auto	Automatically synchronize the projector to an input source.
	7	Input	Select an input source manually.
	8	Enter	Confirm an selection.
	9	Arrow keys	Use arrow keys to navigate through the menu or select the appropriate settings.
	10	Menu	Show the main menu on the screen.
	11	Exit	Back to previous Menu.
	12	Gamma	Set the gamma of the image.
	13	Bright	Set the brightness of the image.
	14	Cont.	Set the contrast of the image.
	15	PIP	Set up the picture in picture (PIP) mode.
	16	Lens H	Adjust the image position horizontally.
	17	Lens V	Adjust the image position vertically.
	18	Focus	Adjust the image focus.
	19	Keystone H	Adjust a horizontally keystone image.
	20	Keystone V	Adjust a vertically keystone image.
	21	Zoom	Adjust the image size.
	22	Shutter	Momentarily turn off/on the screen (AV Mute).
	23	Hot Key	Select a specific function set as the hot key.
	24	Pattern	Display test patterns.

1.7 Lenses

The table below is subject to changes and was last updated on 2019-01-03. Consult Barco's web site for the most recent information about available lenses.

Available lenses

Order No	Description	Throw Ratio	Image
R9832781	G Lens - Short Throw (includes lens ring for G60-W series)	0.75 - 0.95 : 1 (WUXGA)	
R9832755	G Lens - Wide zoom	0.95 - 1.22 : 1 (WUXGA)	
R9801784	G Lens - Standard	1.22 - 1.52 : 1 (WUXGA)	
R9832756	G lens - Long Zoom	1.52 - 2.92 : 1 (WUXGA)	
R9832778	G lens - Ultra Long Zoom	2.90 - 5.50 : 1 (WUXGA)	
R9801785	G lens - Ultra Short Throw (*) (*) This lens has special installation instructions. See separated lens installation manual (available on the Barco website)	0.361 : 1 (WUXGA)	

Lens specification table

Projection Lens			R9801785	R9832755	R9801784	R9832756	R9832778	R9832781

Introduction

2

Installation

Overview

- RCU battery installation
- Installing the lens
- Connecting the projector with the power net
- Connecting to a computer or laptop
- Connecting to video sources
- Ceiling mount installation

2.1 RCU battery installation

How to install the batteries of the Remote Control Unit

1. Remove the cover by sliding it in the direction indicated by the arrow
2. Insert two new AAA batteries (observe the polarity).
3. Replace the cover.

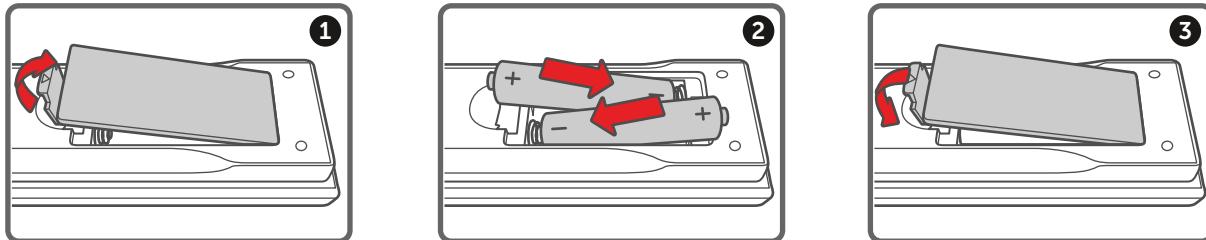

Image 2-1

Notes for the Remote Control Unit

- Be sure to insert the batteries in the corresponding orientations to match the polarities.
- Do not mix new batteries with used batteries as it would shorten the life of new batteries or cause leakage.
- Only used AAA batteries as instructed; do not attempt to insert different types of batteries into the remote control.
- If the remote is going to be unused for long periods of time, be sure to remove the batteries to prevent leakage, which could damage the remote control.
- The liquid contents in the batteries is harmful to the skin; do not touch the leakage with your bare hands directly. When installing fresh batteries, be sure to clean up the leakage thoroughly.
- Under most circumstances, you only need to point the remote control towards the screen and the IR signal would be reflected off the screen and picked up by the IR sensor on the projector. But under specific circumstances, the projector may fail to receive signals from the remote control due to environmental factors. When this happens, orient the remote control at the projector and try again.
- If the range of effective remote control signal reception decreases or if the remote control stops working, replace the batteries.
- If the infrared receiver is exposed to fluorescent lamp or strong sunlight, the remote control may not operate normally.
- Refer to the regulations enforced by your local government on the disposal of used batteries; improper disposal could damage the environment.

2.2 Installing the lens

WARNING: This procedure may only be performed by qualified technical service personnel.

How to install the lens

1. Remove the lens cap counterclockwise.

Caution: Lens cap should be removed before installing the lens. If not it will damage the projector.

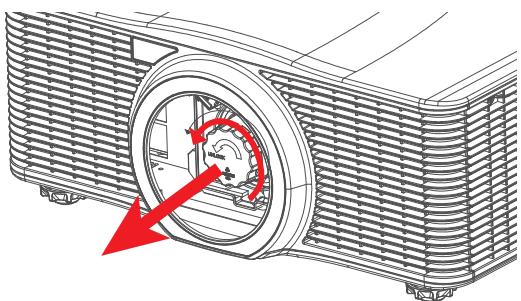

Image 2-2

2. Gently insert the lens in the lens holder. Ensure that the label "TOP" (reference 1) is upwards oriented while inserting the lens.

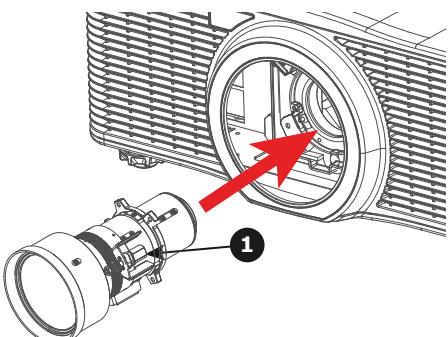

Image 2-3

3. Rotate the lens clockwise to lock the lens.

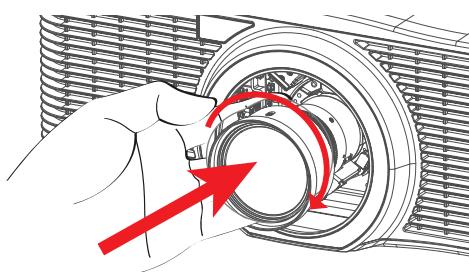

Image 2-4

4. Put the lens ring on the lens. An audible click should be noticed.

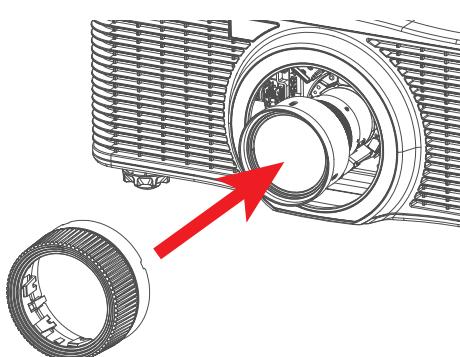

Image 2-5

CAUTION: Do not transport the projector with any lens installed.

2.3 Connecting the projector with the power net

CAUTION: Use only the power cord provided with the projector.

How to connect with local power net

1. Ensure that the power switch stands in the '0' (OFF) position (reference 1)
2. Connect the female side of the power cord with the power input socket of the projector (reference 2)

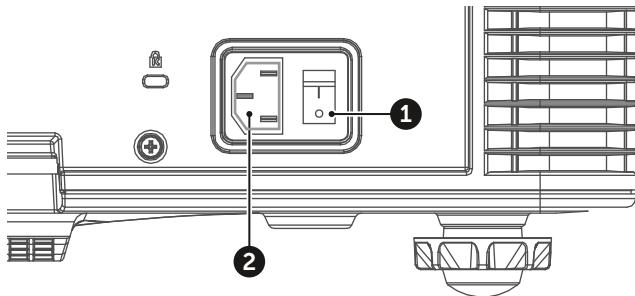

Image 2-6

3. Connect the male side of the power cord to the local power net.

Caution: Ensure that the power net meets the power requirements of the projector.

WARNING: Do not attempt operation if the AC supply and cord are not within the specified voltage and power range.

2.4 Connecting to a computer or laptop

Wiring diagram

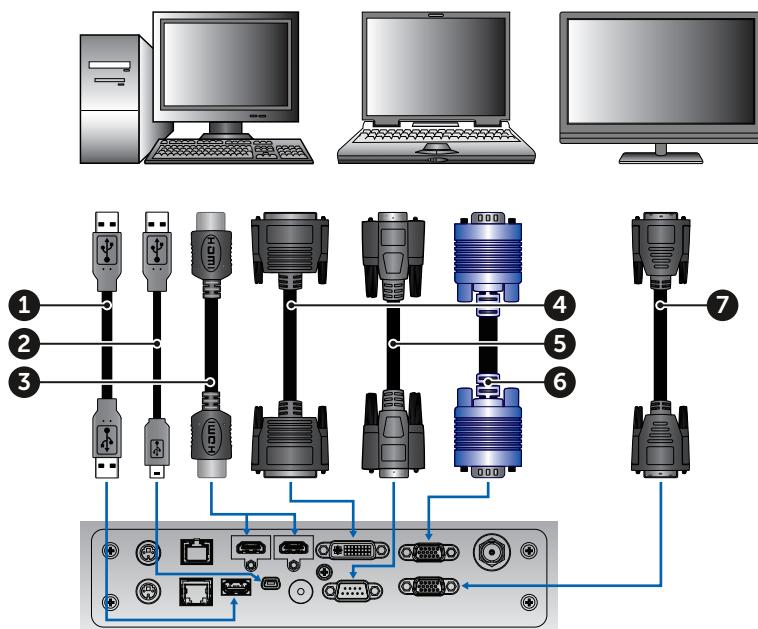

Image 2-7

- | | | | |
|----------|----------------|----------|---------------|
| 1 | USB cable | 5 | RS232 cable |
| 2 | Mini USB cable | 6 | VGA in cable |
| 3 | HDMI cable | 7 | VGA out cable |
| 4 | DVI cable | | |

Notes on wiring diagram:

- The diagram shows the cables/connectors that may be used to connect to various devices.
- Due to the difference in applications for each country, the accessories required in some regions may be different from those shown.
- This diagram is for illustrative purposes only, and does NOT indicate that these accessories are supplied with the projector.

2.5 Connecting to video sources

Wiring diagram

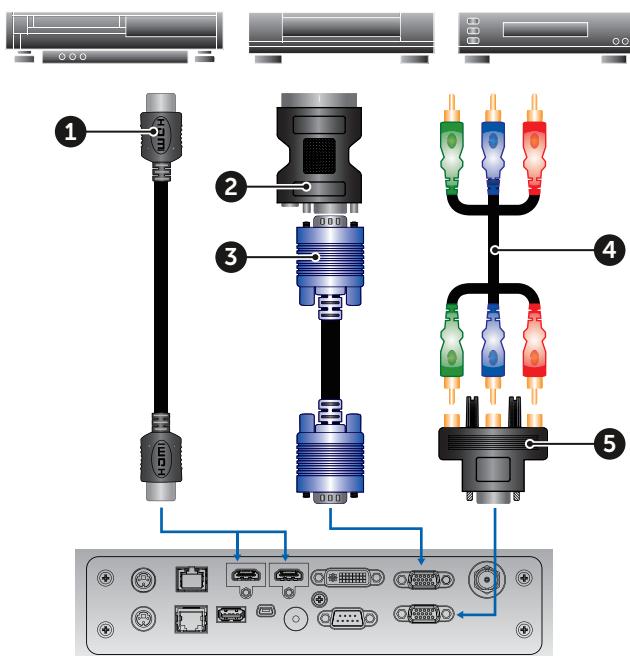

Image 2-8

- 1** HDMI cable
- 2** VGA to RGB scart
- 3** VGA in cable

- 4** RCA component cable
- 5** 15-pin to 3 RCA component/HDTV adapter

Notes on wiring diagram:

- The diagram shows the cables/connectors that may be used to connect to various devices.
- Due to the difference in applications for each country, the accessories required in some regions may be different from those shown.
- This diagram is for illustrative purposes only, and does NOT indicate that these accessories are supplied with the projector.

2.6 Ceiling mount installation

Requirements

To prevent damage to your projector, please use a Barco recommended ceiling mount. Ensure the screws used to install the mount to the projector meet the following specifications:

- Screw type: M6 x 4
- Mounting holes (reference 1, see illustration below)

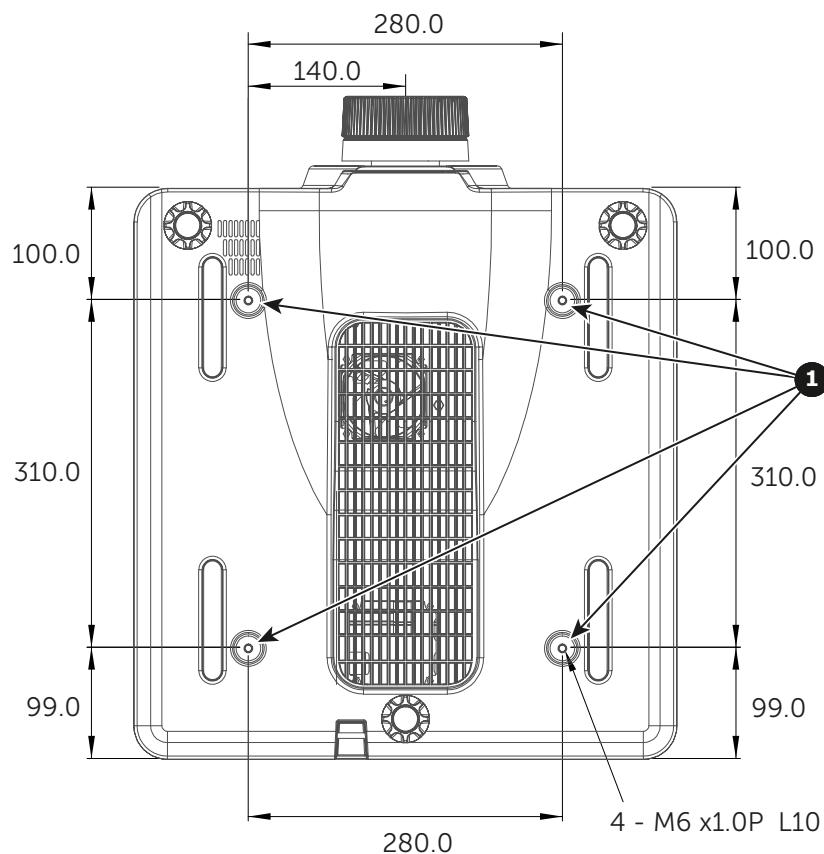

Image 2-9: Dimensions given in millimeters.

Damage resulting from incorrect installation will void the warranty.

Powering On/Off the projector

3

This chapter assumes that the power cord and (all) signal cables are securely connected. For detailed instructions see installation manual.

Overview

- Powering On the projector
- Powering Off the Projector

3.1 Powering On the projector

How to power On the projector

1. Power on the AC switch (1) and wait until the power button on the control panel is solid red.

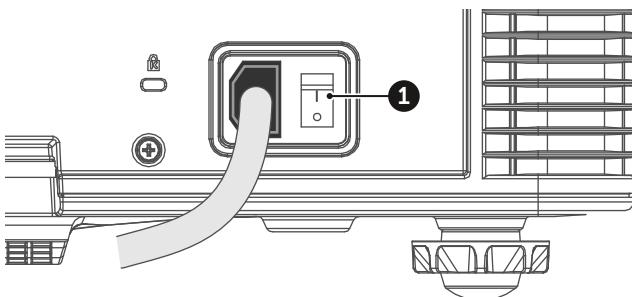

Image 3-1

2. Turn on the projector by pressing the POWER button (2) on the control panel or the ON key (3) on the remote control.

Image 3-2

The status LED (4) will flash orange. The startup screen will display and the status LED will turn to solid green.

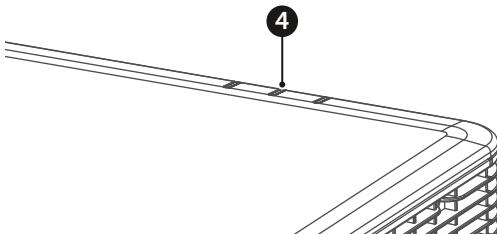

Image 3-3

3. Turn on your source. The projector detects the source you selected and displays the image.

Note: If you connect multiple sources at the same time, press "Input" key on the control panel or on the remote control to switch inputs.

WARNING: Do not look directly into the lens when the projector is turned on. The strong light might cause permanent eye damage.

3.2 Powering Off the Projector

How to power Off the projector

1. Press the POWER button (2) on the control panel or the OFF key (5) on the remote control, a message displays on the screen.

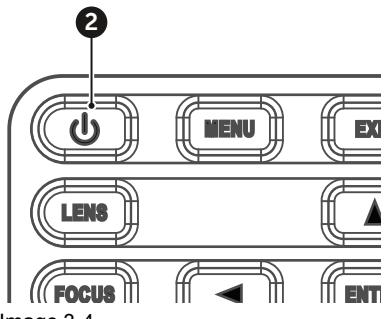

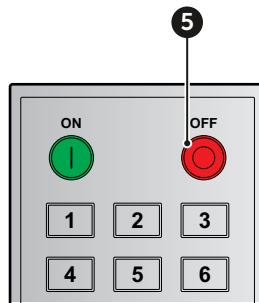

Image 3-4

2. Press the POWER button or OFF key again to confirm, otherwise the message disappears after 5 seconds and the projector remains on.

CAUTION: Don't turn on the projector immediately after entering Standby mode.

Powering On/Off the projector

Adjusting the projected image

4

Overview

- Adjusting the projector's position
- Adjusting the image position on the screen

4.1 Adjusting the projector's position

Positioning the projector

To determine where to position the projector, consider the size and shape of your screen, the location of your power outlets, and the distance between the projector and the rest of your equipment. Here are some general guidelines:

- Position the projector on a flat surface at a right angle to the screen.
- Position the projector to the desired distance from the screen. The distance between the lens and the screen, the zoom settings, and the video format determine the size of the projected image. For projection distances of each lens, see chapter "Lenses", page 13.
- 360 degree free orientation installation:

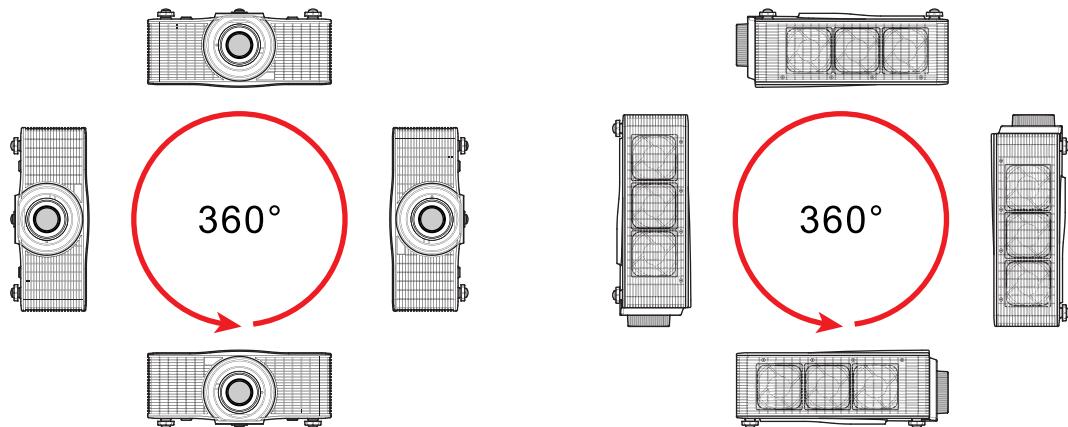

Image 4-1

4.2 Adjusting the image position on the screen

On axis / off axis projection

The position of the projector with reference to the screen may also be different depending on the installation. Basically the projector can be positioned in On-Axis or Off-Axis configuration. On-Axis configuration means that the projector is positioned so as to have the centre of the lens coinciding with the centre of the screen. Off-Axis projection is obtained by shifting the lens up, down, left or right.

Shift range

The lens can be shifted with respect to the DMD (P) which result in a shifted image on the screen (Off-Axis). A 100% shift means that the centre point of the projected image is shifted by half the screen size. In other words, the centre point of the projected image falls together with the outline of the image in an On-Axis projection. Due to mechanical and optical limitations it's recommended to keep the shift values within the field of view (F) as illustrated below. Within these shift ranges the projector and lens perform excellently. Configuring the projector outside these shift ranges will result in a slight decline of image quality.

G60 Vertical Shift range: 100%

G60 Horizontal Shift range: 30%

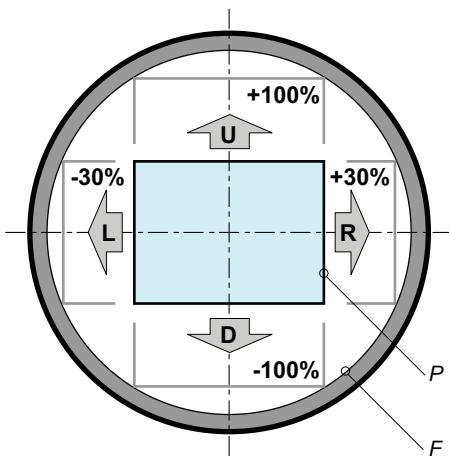

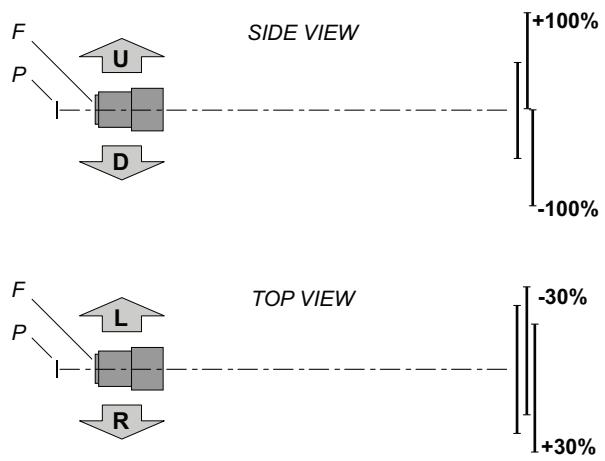

Image 4-2

D DMD
F Field of view

See user guide for instructions on how to shift the lens holder (Screen Menu > Horz/Vert Position)

Adjusting the projected image
